

# Wires and cables for industrial applications

Edition 2015/09

RADOX® - for harsh environment

## Your partner for connectivity solutions

The HUBER+SUHNER Group is a leading international manufacturer of electrical and optical interconnectivity components and systems. Our main markets are communication, transport and industry. Under one roof, we combine technological capabilities in the three core fields of Radio Frequency, Fiber Optics and Low Frequency.

RADOX<sup>®</sup>, the registered HUBER+SUHNER trademark, is synonymous with high-grade wire and cable products developed and produced in-house. RADOX electron-beam crosslinked insulating and jacketing materials, possess the special properties required for developing and manufacturing technically superior products. Its high temperature resistant, flame retardant, reduced wall thickness and easy process ability make it the ideal insulating material for wires and cables in industrial applications.

RADOX® by HUBER+SUHNER –  
for the toughest conditions

RADOX, the registered HUBER+SUHNER trademark, is synonymous with high-grade WIRE+CABLE products developed and produced in-house. RADOX insulating and jacketing material, which are predominantly electron-beam crosslinked, possess the special properties required for developing and manufacturing technically superior products.

We can also provide customer specific solutions.

All our cables fully comply with the European directives  
76/769/EWG, 2003/11/EG, 2000/53/EG, 2003/53/EG  
and 2011/65/EU (RoHS).

Single core/multi core cables for power and signal transmission in industrial applications

Electronic control systems automatically control processes, transmit data and govern motions such as swivelling and conveying etc. The reliability and uptime of such highly automated, complex technical systems is necessary to ensure the efficiency of state-of-the-art production processes. Trouble-free power supply must also be assured at all times. Our cables and system solutions are therefore applied precisely in areas where dependability is a top priority and outstanding heat resistance, high power handling capacity, ruggedness and compact design are a must.

#### Multi core cables, single core cables and system solutions

- RADOX® multi core and single core cables
- RADOX® UL cables

RADOX multi core and single core cables have a high power handling capacity and heat resistance. They have been specifically designed for the construction of high performance, compact and lightweight equipment.

- Outstanding heat resistance
- High power handling capacity
- Ruggedness and compact design
- High flexibility
- Easy processing

See table overview on pages 22 and 23.

Single core/multi core cables for power and signal transmission  
in automation applications

The field of industrial automation has extremely rigorous demands on the performance and quality of the cables used. A cable will achieve top performance only if it offers absolute flexibility and a long service life. In addition, these products must satisfy highly specific customer requirements. Our modular system is the ideal solution for responding to such needs.

**Top quality cables for industrial automation applications with a long service life**

- RADOX® multi core and single core cables, screened and unscreened
- Hybrid cables
- RADOX data cable for Ethernet and CAN-BUS

Our single core and multi core cables are distinguished by their thin insulation walls and their tight bending radius. The hybrid cables offer a multifunctional solution in a single cable.

- Thin insulation walls
- Tight bending radii
- High flexibility
- Abrasion resistance
- High current carrying capacity
- Long service life

See table overview on pages 22 and 23.

Single core/multi core cables for power and signal transmission in coil winding applications

RADOX® 155 are flexible single core and multi core cables offering excellent resistance to heat, hot pressure and aging. The electronically crosslinked insulation offers high mechanical ruggedness. It will not melt and is resistant to most media as well as insulating varnishes and impregnating resins. Brief exposure to heat up to +280 °C will not have any lasting effect.

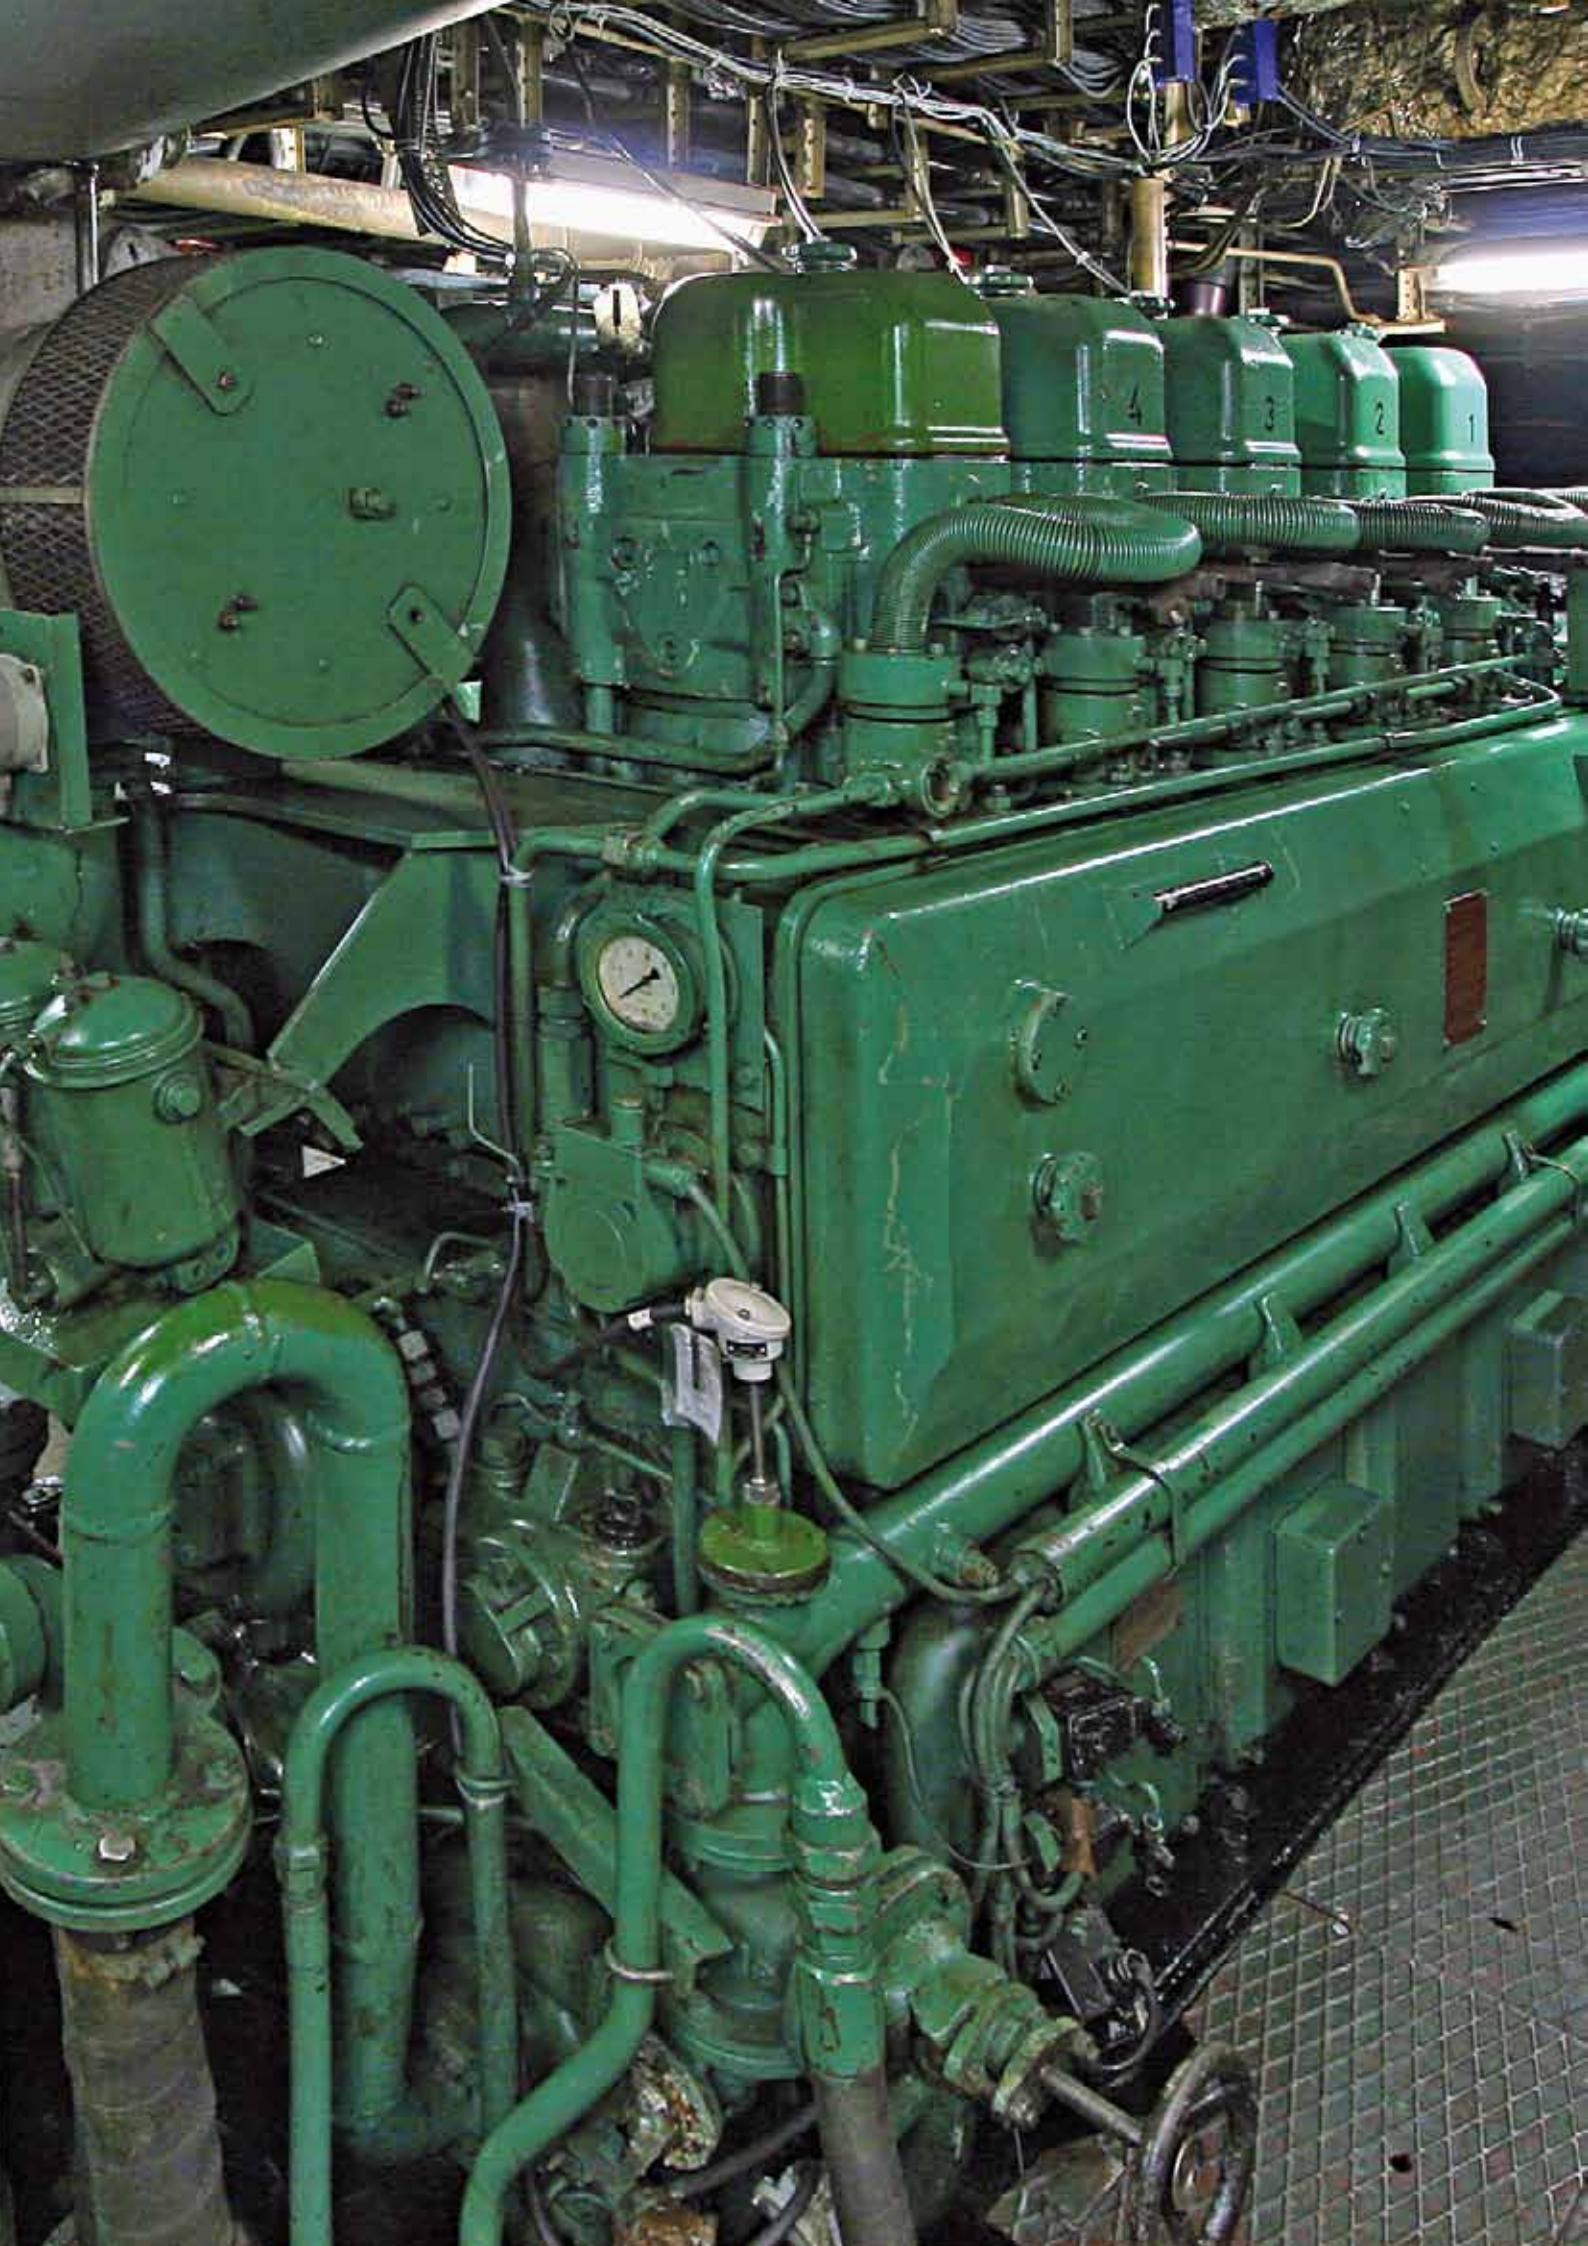

You will find more detailed information and the description of additional products for the coil winding products industry in the «RADOX wires and cables for the coil winding industry» catalogue, item no. 84022718.

#### Flexible single core cables and wires for coil winding products

- RADOX 155, wires and flexible cables
- RADOX UL and KDJ cables
- High temperature data cable for Ethernet and CAN-BUS

These transmission lines offer high power handling capacity and heat resistance. They require little space and therefore allow the construction of high performance yet compact and light weight equipment.

See table overview on pages 22 and 23.

Single core and multi core cables for power and signal transmission in marine applications

Our RADOX® insulation material for cables was developed with special applications in mind which require high reliability even under adverse environmental conditions. It offers excellent resistance to heat and chemicals as well as to electrical and mechanical stressing. Our single core and multi core cable solutions for marine applications are suitable for stationary as well as mobile uses. They have small diameters, standardised dimensions and require only a short time to install.

#### Marine cables with GL, DNV and BV approvals

- RADOX 125 IEC marine transmission line
- RADOX MFH control, data and power transmission lines for marine applications
- Data cable for Ethernet and CAN-BUS with marine approval
- SHF 2 mud jacket according to NEK 606

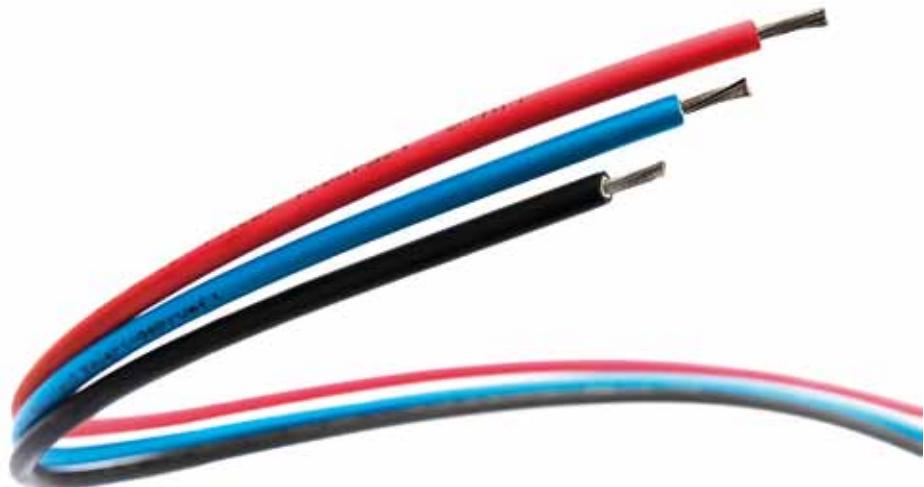

These cable types are particularly distinguished by their resistance to fuels and lubricants, alkalis and acids.

- Light-weight, space saving hybrid solutions meeting the most rigorous demands
- Highly abrasion resistant single cores for corrugated copper cables
- Customised, multifunctional system cables
- Versatile cable and element combinations
- High temperature data bus for marine applications

See table overview on pages 22 and 23.

Single core and multi core cables for power and signal transmission in solar applications

RADOX® solar cables are extremely rugged and abrasion resistant and are capable of withstanding extreme mechanical stressing. Their high temperature and excellent weather-proof ensure a long service life of the cable. Thanks to the technology and high precision of RADOX products, these outstanding characteristics are achieved also with small diameters.

#### Solar cables with TÜV and UL approval

- RADOX solar cable single and multiple core/screened
- RADOX SMART

RADOX solar cables are flexible single core and multi core cables that have been specially designed for the wiring of solar systems.

- Range of application -40 to +120 °C
- Short circuit strength up to +250 °C
- RADOX electronic crosslinked materials will neither melt nor flow even when exposed to high temperatures
- High UV, ozone and hydrolysis resistance
- Excellent mechanical ruggedness and resistance to water, oils and chemicals
- Proven of many years of field application worldwide
- TÜV and UL approvals

See table overview on pages 22 and 23.

Single core and multi core cables for power and signal transmission in safety applications

Installations in buildings and systems with a high person density or high property value – computer centres, hospitals, high-rise buildings, airports, railway stations, public buildings, museums, railway and road tunnels – require high grade cables designed to the necessary standards.

These cable families are distinguished by their precisely defined characteristics and the fact that they will maintain their functions in case of fires. They comply with the major international standards.

**High grade cables fulfilling various international fire protection regulations**  
• RADOX® FR AUS

Our safety cables have been designed for service in adverse and humid environments.

- Maintenance of functions in case of fire
- Application in rough and humid environments
- High flexibility
- Approved by major international standardisation bodies
- Customised cables

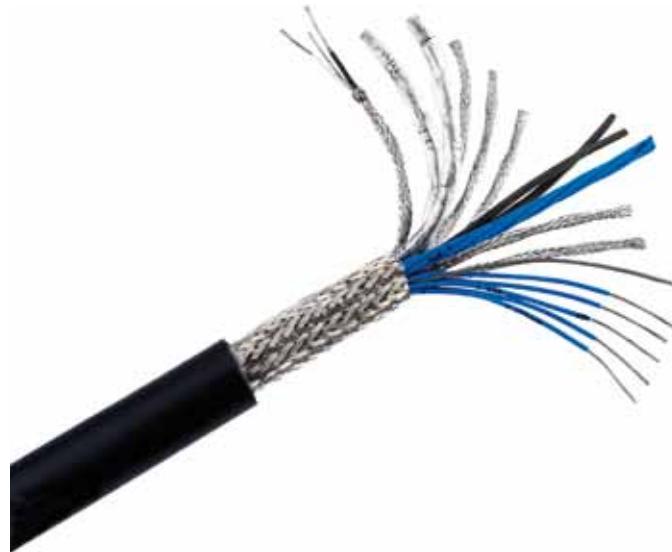

See table overview on pages 22 and 23.

Single core/multi core cables for power and signal transmission in defence applications

HUBER+SUHNER develops and produces high grade solutions that are suitable for the most extreme environmental conditions. They can be installed in very tight spaces and will satisfy even the most stringent demands.

HUBER+SUHNER is the professional partner in the development and production of system solutions which incorporate all our knowledge and engineering expertise.

Unpredictable conditions, fulfilment of extreme environmental and operating requirements while meeting top quality standards.

- RADOX® single core and multi core cables
- VG transmission lines
- Hybrid cables
- Various MIL styles
- MIL-CAT data cable for harsh environment

RADOX single core and multi core cables have been developed and are produced for high grade defence solutions.

- Wide temperature range
- Stationary as well as mobile applications
- Small overall diameter
- Flexible and rugged
- Light-weight and space saving solutions
- Chemical and mechanical resistance

See table overview on pages 22 and 23.

# RADOX® 125

Flexible single core

- Excellent high and low temperature and ozone resistance
- Weatherproof
- Halogen free
- Flexible, easy to strip and process
- High resistance to thermal pressure
- High abrasion resistance
- Oil-resistant

## Application

Protected and fixed installation inside electrical equipment, especially suitable for the connection of motor windings, switchboards, white goods and lighting fixtures.

## Composition of cable

① Conductor	stranded tin plated copper, acc. to EN 60228, class 5
② Insulation	RADOX 125 extruded and electron beam crosslinked polyolefin copolymer
Core colours	various, on request

## Technical data

Voltage rating U <sub>0</sub> /U	≤ 0.50 mm <sup>2</sup>	450/750 V AC
Test voltage	≤ 0.50 mm <sup>2</sup>	2500 V AC
Voltage rating U <sub>0</sub> /U	> 0.50 mm <sup>2</sup>	600/1000 V AC
Test voltage	> 0.50 mm <sup>2</sup>	3500 V AC
Temperature range		-40 up to +125 °C

## The cables are in conformity with:

Halogen free compound	fulfilled	EN 50363
Corrosivity of combustion gases	pH ≥ 4.3, σ ≤ 10 µS/mm	EN 50267-2-2
Amount of halogen acid gas	HCl + HBr ≤ 0.5 %	EN 50267-2-1
Content of fluorine	HF ≤ 0.1 %	EN 60684-2, # 45.2

# RADOX® 155 S

Flexible single core – high oil resistance

- Excellent high and low temperature and ozone resistance
- Weatherproof
- High resistance to heat pressure
- High abrasion resistance
- Easy to strip and process
- Resistant to hydrolysis, oil and fuels
- Resistant to impregnation resins and varnishes

## Application

Protected and fixed installation inside electrical equipment, especially suitable for the connection of motor windings, switchboards, magnets and transformers.

## Composition of cable

① Conductor	stranded tin plated copper, acc. to EN 60228, class 5
② Insulation	RADOX 155 S
Core colours	extruded electron beam crosslinked polyolefin copolymer various, on request

## Technical data

Voltage rating U <sub>0</sub> /U	≤ 0.50 mm <sup>2</sup>	450/750 V AC
Test voltage	≤ 0.50 mm <sup>2</sup>	2500 V AC
Voltage rating U <sub>0</sub> /U	> 0.50 mm <sup>2</sup>	600/1000 V AC
Test voltage	> 0.50 mm <sup>2</sup>	3500 V AC
Temperature range		-55 up to +155 °C
Min. bending radius		3 x core-dia.

# RADOX® 155 S

Flexible single core – high oil resistance

Various colours on request.

# RADOX® KDJ-11

Flexible single core

- Resistant to solvents, oils, fuels, alkaline solutions, acids and hydrolysis
- Weatherproof
- Impermeable to vapour
- Compact design
- Mechanical robustness in aggressive environment at high and low temperatures

## Application

- Wiring of equipment for heating and refrigeration units, chemical plants, wet or humid rooms and rooms with high ambient temperatures.
- Compatible to moulding compounds.
- Transformer in oil, class H motors.

## Composition of cable

① Conductor	stranded bare copper, acc. to EN 60228, class 5
② Insulation	FEP
Core colours	various, on request

## Technical data

Voltage rating U <sub>o</sub> /U	0.50 and 1.0 mm <sup>2</sup> 1.50 up to 25 mm <sup>2</sup>	300/500 V AC 450/750 V AC 2500 V AC

## Multi core cable

- Excellent high and low temperature and ozone resistance
- Weatherproof
- Halogen free
- Flame retardant
- Soldering resistant
- Flexible
- In case of fire no corrosive gases and low smoke emission
- Easy to strip

### Application

Permanent installation indoor and outdoor for the connection of fixed and loose parts.

### Composition of cable

① Core:	
Conductor	stranded tin plated copper, acc. to EN 60228, class 5
Insulation	RADOX 125
Core colours	extruded and electron beam crosslinked polyolefin copolymer
	2 up to 5 core acc. to CENELEC HD 308 (see page 127)
	6 core and more: black numbered with yellow/green earthing
② Fillers (optional)	RADOX 125
③ Separator	plastic tape
④ Sheath	RADOX 125M: extruded and electron beam crosslinked polyolefin copolymer
Colour	black

### Technical data

Voltage rating U <sub>0</sub> /U	≤ 16 × 0.50 mm <sup>2</sup>	450/750 V AC
Test voltage	≤ 16 × 0.50 mm <sup>2</sup>	2500 V AC
Voltage rating U <sub>0</sub> /U	> 16 × 0.50 mm <sup>2</sup>	600/1000 V AC
Test voltage	> 16 × 0.50 mm <sup>2</sup>	3500 V AC
Temperature range	fixed	-40 up to +125 °C
Min. operating temperature	flexing	-25 °C
Max. conductor temperature	at short circuit (max. 5 s)	+280 °C
Min. bending radius	fixed	3 × cable-dia.
	flexing	5 × cable-dia.

### The cables are in conformity with:

Halogen free compound	fulfilled	EN 50363
Corrosivity of combustion gases	pH ≥ 4.3, σ ≤ 10 µS/mm	EN 50267-2-2
Amount of halogen acid gas	HCl + HBr ≤ 0.5 %	EN 50267-2-1
Content of fluorine	HF ≤ 0.1 %	EN 60684-2, # 45.2

# RADOX® UL1385 / CSA AWM I A/B

Flexible single core

- Excellent high and low temperature and ozone resistance
- Weatherproof
- Flame retardant
- High resistance to heat pressure
- High abration resistance
- Highly resistant to hydrolysis
- Resistant to impregnation resins and varnishes
- Easy to process
- Soldering resistant insulation
- Flexible

## Application

Protected and fixed installation inside electrical equipment, especially suitable for the connection of motor windings, switchboards, magnets and transformers.

## Composition of cable

① Conductor	stranded tin plated copper, acc. to EN 60228, class 5
② Insulation 1	electron beam crosslinked polyalcen
③ Insulation 2	electron beam crosslinked polyvinylidenfluorid (PVDF)
Core colours	various, on request

## Technical data

Voltage rating	600 V AC
Operating temperature	+125 °C
Min. temperature	-65 °C
Min. bending radius	3 × core-dia.

## Approvals

UL AWM 1385	125 °C, no voltage rating
CSA AWM I A/B	125 °C, 300 V, FT1, FT2

# RADOX® UL 3266 / CSA AWM I A/B

Flexible single core

- Excellent high and low temperature and ozone resistance
- Weatherproof
- High abrasion resistance
- Resistant to impregnation resins and varnishes
- Easy to process
- Soldering resistant
- Flexible

## Application

Protected and fixed installation inside electrical equipment, especially suitable for the connection of motor windings, switchboards, magnets and transformers.

## Composition of cable

① Conductor	stranded tin plated copper, acc. to EN 60228, class 5
② Insulation	RADOX
Core colours	extruded and electron beam crosslinked polyolefin copolymer various, on request

## Technical data

Voltage rating U <sub>o</sub> / U	300 V AC
Test voltage	2000 V AC
Operating temperature	+125 °C
Max. conductor temperature	+280 °C
Min. operating temperature	-25 °C
Min. bending radius	-40 °C
	3 × core-dia.

## Standards

Appliance wiring material	CSA C22.2 no. 210.2	AWM I A/B 125 °C 300 V
Appliance wiring material	UL 758	style 3266

## Approvals

UL	Underwriters Laboratories	file no. E63322
CSA	Canadian Standards Association	report no. 69581

## The cables pass the following fire tests:

Vertical flame spread FT2	L ≤ 100 mm	CSA C22.2 no. 0.3 # 4.11.2
Horizontal flame spread, Appliance-wire	V ≤ 25 mm/Min.	UL 1581 # 1090

# RADOX® UL 3266 / CSA AWM I A/B

MIL 4412 A1, single core MIL-W-81044/12)	80
MIL 4412 E1, single core, screened (MIL-W-81044/12)	82
MIL 4412 E2, screened pair (MIL-W-81044/12)	84
VG single cores and cables	86
RADOX MFH, power and signal cables, multi core, screend and unscreend	96
Hybrid cables	98

All our cables fully comply with the European directives  
76/769/EWG, 2003/11/EG, 2000/53/EG, 2003/53/EG  
and 2011/65/EU (RoHS).

# MA 12 A1

## System element

- Halogen free
- Easy to process
- High media and abrasion resistance
- Excellent resistance to high and low temperatures
- Flame retardant
- High resistance to heat pressure

### Application

Dry and protected, flexible and fixed installation inside electrical equipment, elements of control and supply cables and system cables.

### Composition of cable

① Conductor	stranded tin plated copper, acc. to MIL-W-29606 TCC
② Insulation	Multi A-12, extruded polyester
Colours	various, on request

### Technical data

Voltage rating	600 V AC
Test voltage	3000 V AC
Temperature range	-40 up to +120 °C
Min. bending radius	3 × core-dia.

### Fire tests

Flame propagation:	
Vertical of a single cable	EN 50265-2-1, IEC 60332-1
Content of halogen acid gas	EN 50267-2-1, IEC 60754-1 0 mg/g

# MA 12 A1

# VG 95218 T020

Type A and type G

- Temperature range  
–55 up to +150 °C
- Resistant to oils, fuels, lubricants, alkaline solutions and acids
- Notch and abrasion resistant
- Small outer diameter, low weight
- Flame retardant, self-extinguishing
- Easy to strip
- Easy to process
- Soldering resistant

## Application

Wiring of electrical/electronic systems, for system cables in defence, aircraft, sensor systems, instrumentation, motors, transformers and industrial automation.

## Technical data

Cross section from to	type A	0.25 – 16 mm <sup>2</sup>
	type G	1.5 – 95 mm <sup>2</sup>
Insulation material	type A	ETFE
	type G	polyolefin-X
Voltage rating	600 V AC	
Number of conductors	1	
Conductor class		VG 95218/BWB specification

## Approvals

BA für Wehrtechnik und Beschaffung certificate of approval no. U3.h/10015  
VDE certificate no. 9430

# VG 95218 T020

Type E and type F

- Temperature range  
–55 up to +105 °C
- Resistant to oils, fuels, lubricants, alkaline solutions and acids
- Notch and abrasion resistant
- Small outer diameter, low weight
- Flame retardant, self-extinguishing
- Easy to strip
- Easy to process
- Soldering resistant
- Halogen free

## Application

Wiring of electrical/electronic systems, for system cables in defence, aircraft, sensor systems, instrumentation, motors, transformers and industrial automation.

## Technical data

Cross section from to	type E	0.15 – 3 mm <sup>2</sup>
	type F	1.5 – 95 mm <sup>2</sup>
Insulation material	type E	high tech polymer/aromatic p.
	type F	polyolefin-X
Voltage rating	600 V	
Number of conductors	1	
Conductor class		VG 95218/BWB specification

## Approvals

BA für Wehrtechnik und Beschaffung  
VDE

certificate of approval no. U3.h/10015  
certificate no. 106443 and 134557

# VG 95218 T021

Type C and type E

- type C acc. to T020 type E
- type E acc. to T020 type A

## Application

Wiring of electrical/electronic systems, for system cables in defence, aircraft, sensor systems, instrumentation, motors, transformers and industrial automation.

## Technical data

Cross section from to	0.15 - 3 mm <sup>2</sup>
Insulation material	high tech polymer/aromatic p. ETFE white
Voltage rating	600 V
Number of conductors	2 - 4
Conductor class	VG 95218/BWB specification

## Approvals

BA für Wehrtechnik und Beschaffung  
VDE certificate of approval no. U3.h/10016  
certificate no. 9431 and 106444

# VG 95218 T022

Type C screened

- Temperature range  
–55 up to +150 °C
- Resistant to oils, fuels, lubricants, alkaline solutions and acids
- Notch and abrasion resistant
- Small outer diameter, low weight
- Flame retardant, self-extinguishing
- Easy to strip
- Easy to process
- Soldering resistant

## Application

Wiring of electrical/electronic systems, for system cables in defence, aircraft, sensor systems, instrumentation, motors, transformers and industrial automation.

## Technical data

Cross section from to	0.25 – 2.5 mm <sup>2</sup>
Insulation material	ETFE white
Voltage rating	600 V
Number of conductors	1
Conductor class	VG 95218/BWB specification
Screen	CU tinned, optimised
Jacket	ETFE white

## Approvals

BA für Wehrtechnik und Beschaffung  
VDE

certificate of approval no. U3.h/10017  
certificate no. 9432

# VG 95218 T023

Type F, multi core screened

- Temperature range  
–55 up to +150 °C
- Resistant to oils, fuels, lubricants, alkaline solutions and acids
- Notch and abrasion resistant
- Small outer diameter, low weight
- Flame retardant, self-extinguishing
- Easy to strip
- Easy to process
- Soldering resistant

## Application

Wiring of electrical/electronic systems, for system cables in defence, aircraft, sensor systems, instrumentation, motors, transformers and industrial automation.

## Technical data

Cross section from to	0.25 – 3.0 mm <sup>2</sup>
Insulation material	ETFE
Voltage rating	600 V
Number of conductors	2 - 7
Conductor class	VG 95218/BWB specification
Screen	CU tinned, optimised
Jacket	ETFE white

## Approvals

BA für Wehrtechnik und Beschaffung  
VDE

certificate of approval no. U3.h/10018  
certificate no. 9433

# VG 95218 T024

## Type K

- Temperature range  
-40 up to +150 °C
- Weatherproof
- Resistant to mineral oils and fuels
- High abrasion resistance
- Flame resistant, self-extinguishing
- Non-melting
- Flexible
- System compatibility with heat shrink parts according to VG 95343 part 14

### Application

System cables in defence, aircraft, sensor systems and instrumentation.

### Technical data

Cross section from to	1.5 – 95 mm <sup>2</sup>
Insulation material	RADOX®
Voltage rating	600 V
Number of conductors	1
Conductor class	VG 95218/BWB specification
Jacket	RADOX elastomer S, black

### Approvals

BA für Wehrtechnik und Beschaffung  
VDE

certificate of approval no. U48/05019  
certificate no. 40000936

# VG 95218 T025

Type G, high flexible

- Temperature range  
-40 up to +150 °C
- Weatherproof
- Resistant to mineral oils and fuels
- High abrasion resistance
- Flame resistant, self-extinguishing
- Non-melting
- Flexible
- System compatibility with heat shrink parts according to VG 95343 part 14

## Application

System cables in defence, sensor systems, instrumentation and ground wires.

## Technical data

Cross section from to	10 - 240 mm <sup>2</sup>
Insulation material	RADOX® elastomer S, black
Voltage rating	600 V
Number of conductors	1
Conductor class	VG 95218/BWB specification, plain

## Approvals

BA für Wehrtechnik und Beschaffung  
VDE

certificate of approval no. U48/06099  
certificate no. 40000952

# VG 95218 T026

Type H, high flexible

- Temperature range  
-40 up to +150 °C
- Weatherproof
- Resistant to mineral oils and fuels
- High abrasion resistance
- Flame resistant, self-extinguishing
- Non-melting
- Flexible
- System compatibility with heat shrink parts according to VG 95343 part 14

## Application

Control and supply cables in fixed and moving systems of defence and sensor systems.

## Technical data

Cross section from to	25 - 240 mm <sup>2</sup>
Insulation material	RADOX® elastomer S, black
Voltage rating	600 V
Number of conductors	1

# RADOX® MFH

MFH-S

Multi cores and twisted pairs screened and unscreened

- Ozone, hydrolysis, chemical resistant
- Weatherproof
- Easy to process
- Light weight
- Wide operating temperature range
- Halogen free
- Flame retardant

## Application

For fixed installations in dry, damp or wet locations, inside and outside of ships, industrial equipment, defence equipment, buses, other vehicles and railway rolling stock.

## Composition of cable

①	Centre (if necessary)	RADOX filler
②	Cores	type MA14; RADOX TI301 (145 °C/20 000 hours)
	Conductor	stranded tin plated copper, acc. to EN 60228, class 5
	Core colours	optional with pair screen and drain wire
③	Fillers (optional)	see table
④	EMV screening	RADOX
⑤	Separator	optimised tin plated copper braid, optical coverage: ≥ 85 %
⑥	Sheath	textile yarn
	Colour	RADOX elastomer S FH (SHF 2; SHF mud NEK 606)
		black and blue

## Technical data

Voltage rating U <sub>o</sub> /U	600/1000 V AC	
Test voltage	3500 V AC	
Temperature range	−50 up to +145 °C	
Min. bending radius	fixed	≤ 12 mm ≥ 12 mm
	flexing	3 × cable-dia. 4 × cable-dia. > 12 mm > 12 mm
		5 × cable-dia. 6 × cable-dia.

## Fire tests

Flame propagation:	
Vertical of a single cable	EN 50265-2-1, IEC 60332-1

# Hybrid cables

$2 \times 2 \times 0.25 \text{ mm}^2 + 1\text{KO MA14 / REMS FH BK}$  (example out of our product range)

- Customised solutions
- Physical and chemical characteristics according to specifications
- Power and data transmission
- Installation of one cable only
- Small dimensions
- Low weight
- Multifunctional

## Application

Control cable, CCTV for example in tunnels, buildings, airports

### Composition of cable

① Coaxial cable $75 \Omega$	type RG_179-B/U Inner conductor Insulation Screening Sheath	steel, copper and silver plated PTFE silver plated copper braid FEP, colour: brown	dia: 0.30 mm dia: 1.53 mm dia: 2.00 mm dia: 2.54 mm
② 2 pairs of $2 \times 0.25 \text{ mm}^2$	type Multi A-14 A2-0.25 Conductor Dual wall Colours	tin plated copper high tech polymer blue/brown, black/grey	dia: $19 \times 0.12 \text{ mm}$ dia: 1.02 mm dia: 2.04 mm
③ 3 x fillers	RADOX®		
④ Separator	plastic tape		
⑤ Sheath	RADOX elastomer S FH Colour		dia: $7.1 \pm 0.3 \text{ mm}$

### Technical data

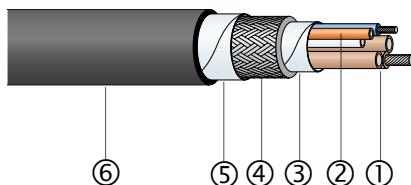

Conductor resistance at $20^\circ\text{C}$	< $86.0 \Omega/\text{km}$
Voltage rating	600 V AC
Test voltage	2500 V
Max. conductor temperature	+120 °C
Min. operating temperature	-25 °C
Min. bending radius	10 × cable-dia.

### Coaxial cable RG\_179-B/U:

Impedance	75 Ω
Capacitance	63 pF/m
Velocity of signal propagation	69 % of the speed of light
Attenuation at $20^\circ\text{C}$ (typ. value)	3.0 dB/100 m
f = 1 MHz	9.5 dB/100 m
f = 10 MHz	30 dB/100 m
f = 100 MHz	

# Hybrid cables

3 × 24 AWG + 3 × KO 2253D-02 (example out of our product range)

- Customised solutions
- Physical and chemical characteristics according to specifications
- Power and data transmission
- Installation of one cable only
- Small dimensions
- Low weight
- Multifunctional

## Application

Control cable, CCTV for example in tunnels, buildings, airports

## Composition of cable

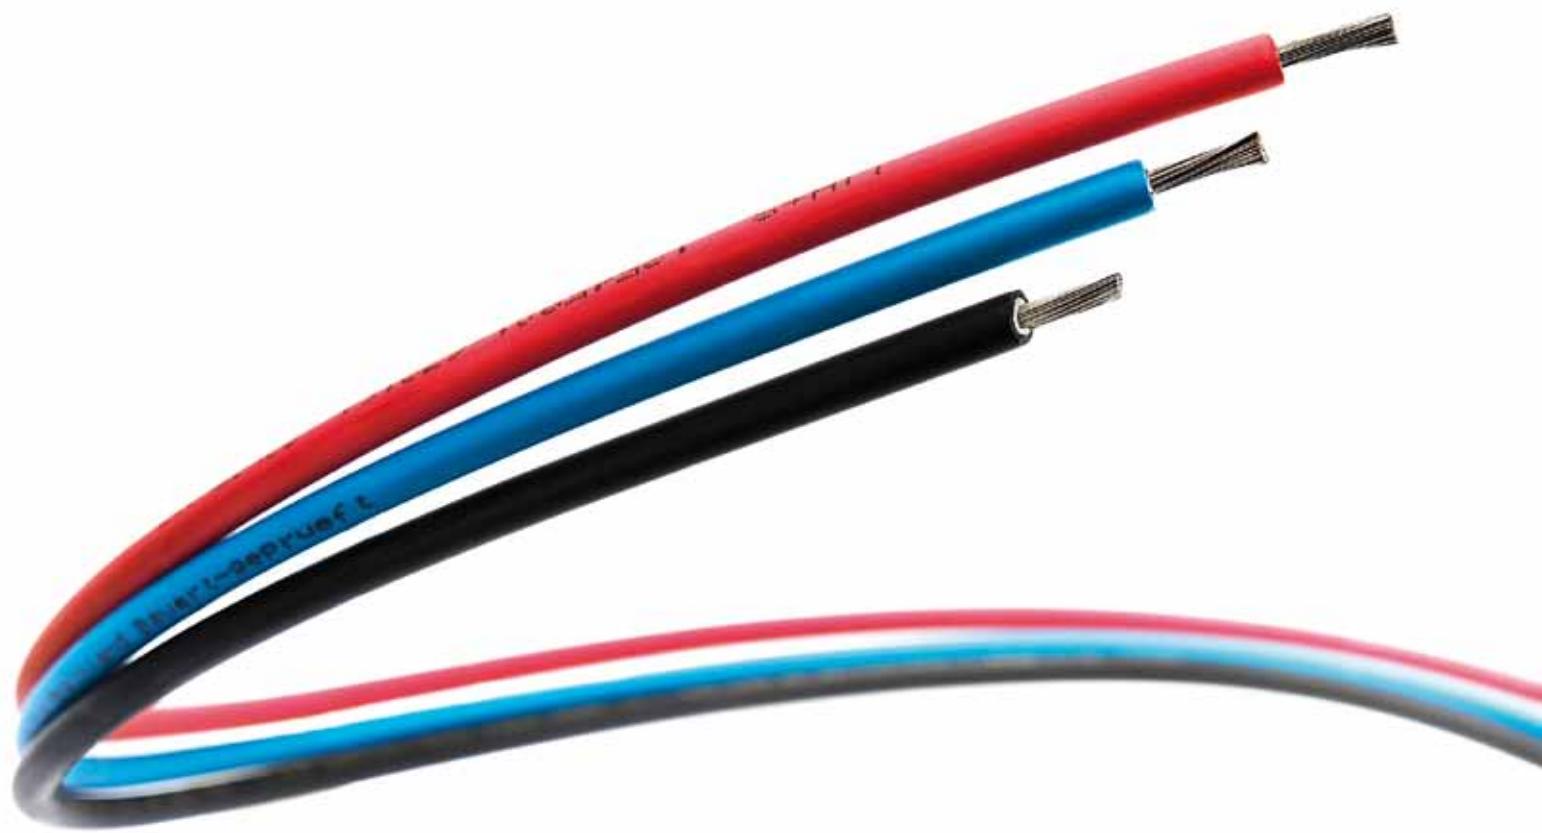

① 3 coaxial cables 75 Ω	type K 02253 D-02	
Inner conductor	steel, copper and silver plated	dia: 0.30 mm
Insulation	PTFE	dia: 1.53 mm
Screening 1	silver plated copper braid	dia: 2.00 mm
Screening 2	silver plated copper braid	dia: 2.50 mm
Sheath	FEP, colour: brown	dia: 3.00 mm
② 3 cores 24 AWG	type 22759-32A1-24	
Conductor	tin plated copper	dia: 19 × 0.13 mm
Insulation	XETFE	dia: 0.94 mm
Colours	white, blue, orange	
③ Separator	plastic tape	
④ EMV screening	tin plated copper braid	dia: 7.3 mm
⑤ Separator	plastic tape	
⑥ Sheath	RADOX® elastomer S	
Colour	black	dia: 9.3 ± 0.3 mm

## Technical data

Conductor resistance at 20 °C	< 90.5 Ω/km
Voltage rating	600 V
Test voltage	1500 V
Transfer impedance	80 mΩ/m
Temperature range	-50 up to +150 °C
Temperature range	-40 up to +150 °C

## Coaxial cable K 02253D-02:

Impedance	75 Ω
Capacitance	63 pF/m
Velocity of signal propagation	69 % of the speed of light
Attenuation at 20 °C (typ. value)	30 dB/100 m
	9.5 dB/100 m
	30 dB/100 m
Temperature range	-40 up to +150 °C

# RADOX® Solar cables

RADOX® Solar cable means flexible single and multi-core cables specially designed for wiring solar plants.

RADOX® Solar cables are extremely robust and resist high mechanical load and abrasion. High temperature resistance and excellent weather-proofing characteristics provide a long service life. Due to RADOX® technology, these outstanding properties have been achieved with small cable diameters.

Tight production tolerances – specifically for automated processes – enable easy assembly of cables. This represents a special advantage for molding, casting or soldering with no shrinking or other changes in electron-beam cross-linked material. There is no cold flow with RADOX® cables which guarantees long-term, optimum tightness for connectors or transitions. In case of fire there is no occurrence of corrosive or toxic gases. Smoke production in case of fire is very low.

## General features

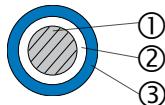

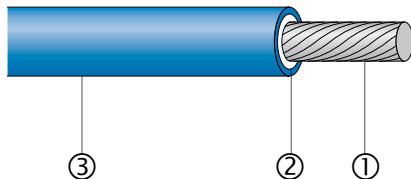

- Temperature range for applications –40 to +120 °C
- RADOX® electron-beam cross-linked materials do not melt or flow, even at high temperatures
- High resistance against UV-, ozone- and hydrolyses
- Very high mechanical robustness and resistance against water, oil and chemicals
- Compact and flexible
- Years of approved applications worldwide
- TÜV Rheinland and UL approval

RADOX SOLAR cable single core	102
RADOX® Solar 125 WW	104
RADOX Smart	106
RADOX® Solar 125 WW +	108
RADOX® Solar 125 AC multi-core	110

All our cables fully comply with the European directives  
76/769/EWG, 2003/11/EG, 2000/53/EG, 2003/53/EG  
and 2011/65/EU (RoHS).

# RADOX® Solar cable

## Single core cable

- TÜV Rheinland approval, PV1-F
- Double insulated construction (safety class II)
- Space saving outer diameter
- Long service life, extremely robust
- Electronbeam, cross-linked insulation and sheath
- High resistance against heat, cold, oil, abrasion, ozone, UV and weather
- Halogen free, flame retardant
- Flexible, easy to strip
- Meter marking – easy installation

### Application

Specifically designed for connecting photovoltaic system components inside and outside of buildings and equipment with high mechanical requirements and extreme weather conditions.

### Composition of cable

① Conductor	stranded tin plated copper, fine wired, acc. to EN 60228, class 5
② Insulation	RADOX® 125
③ Sheath	RADOX® 125
Colours	see table

### Technical data

Conductor resistance at 20 °C see table

TÜV Rheinland:

voltage rating line to ground	$U_o$	600 V AC
voltage rating line to line	$U$	1000 V AC
maximum voltage line to ground		720 V AC
maximum voltage line to line	$U_m$	1200 V AC
maximum voltage line to ground	$V_o$	1100 V DC
maximum voltage line to line		1800 V DC
test voltage AC		6.5 kV
test voltage DC		15 kV
lower ambient temperature		-40 °C
upper ambient temperature		+90 °C
max. conductor temperature		+120 °C

Min. bending radius

4 × cable-dia.

# RADOX® Solar cable

## Single core cable

### Complies with:

Vertical flame spread	$50 < L \leq 540$ mm	EN 60332-1-2, IEC 60332-1-2
Corrosivity of combustion gases	$pH \geq 4.3$ , $\sigma \leq 10 \mu\text{S}/\text{mm}$	EN 50267-2-2, IEC 60754-2
Amount of halogen acid gas	$\text{HCl} + \text{HBr} \leq 0.5\%$	EN 50267-2-1, IEC 60754-1
Content of fluorine	$\text{HF} \leq 0.1\%$	EN 60684-2, 45.2
Acid and alkaline resistance	168 h/23 °C	EN 60811-2-1, 10
Weather resistance	720 h	EN ISO 4892-2, Meth. A
RoHS Directive	fulfilled	2002/95/EC

### Approvals

# RADOX® Solar 125 WW

Single core for PV installations

- Approved according to global standards for PV systems (PV1-F)
- Meets the EN 50618 standard for PV cables
- High resistance against high and low temperatures, oil, abrasion, ozone, UV and harsh weather
- Increased safety due to dual insulation, notch-resistant
- Short circuit-resistant
- Space saving outer diameter
- Large operational temperature range -40 to +120 °C
- Long service life
- Halogen free, flame retardant
- Flexible, easy to strip
- Marked every metre for easy installation

## Application

Specially developed for indoor and outdoor installation of photovoltaic system components, and devices which are exposed to high mechanical load and extreme weather conditions. Complies with European standards (CENELEC HD), the double-insulation design also supports the use in non-earthed photovoltaic systems. RADOX Solar cables allow low cost installation without conduits if required.

## Composition of cable

① Conductor	stranded tin plated copper, fine wired, acc. to IEC/EN 60228, class 5
② Insulation	RADOX 125 I Solar
③ Outer insulation	RADOX 125 S Solar
Colours	see table

## Technical data

UL	voltage rating	600 V AC
	test voltage	3.0 kV AC
	temperature rating	90 °C wet or dry, sunlight resistant
TÜV Rheinland:	voltage rating line to ground	U <sub>o</sub> 600 V AC/900 V DC
	voltage rating line to line	U 1000 V AC/1500 V DC
	maximum voltage line to ground	720 V AC
	maximum voltage line to line	1200 V AC
	maximum voltage line to ground	1100 V DC
	maximum voltage line to line	1800 V DC
	test voltage AC	6.5 kV
	test voltage DC	15 kV
	lower ambient temperature	-40 °C
	upper ambient temperature	+90 °C
	max. conductor temperature	+120 °C
Min. bending radius	4 × cable-dia.

# RADOX® Smart

Single core cable

- With UL and TÜV Rheinland approvals
- Double insulated construction (safety class II)
- For reliable and durable connections
- Halogen free, flame retardant
- Lean, powerful and flexible
- Of proven RADOX® quality
- Meter marking – easy installation

## Application

### USA

- Type PV: Suitable for interconnection wiring of grounded and ungrounded photovoltaic power systems as described in section 690.31 (A) and other parts of the National Electrical Code (NEC), NFPA 70. For single conductor, double insulated wires installation without using a conduit is permitted according to section 690.35 (D) of the NEC.
- Type RHH oder RHW-2: Suitable for any of the wiring methods recognised in chapter 3 and as specified in their respective tables or as permitted elsewhere in the NEC.

### Europe

- Suitable for the installation methods reference no. 2, 3A, 4A, 5A, 11, 11A, 12, 13, 14, 15, 16, 21, 22A, 23A, 24A, 25, 31A, 32A, 33A, 41, 43, 51, 72, 73, 75 in table 52H of HD 3845.52 (CH: SEV 1000 section 5.2; DE: DIN VDE 0100-520).

## Composition of cable

① Conductor	stranded tin plated copper, fine wired, acc. to EN 60228, class 5
② Inner insulation	RADOX FI
③ Outer insulation	RADOX FS
Colour	black

# RADOX® Solar 125 AC

Multi-core cable for PV installations

- Multi-core AC cable with dual insulation
- Space-saving, enhanced outer diameter
- Short circuit and earth fault resistant
- High resistance against high and low temperature, oil, abrasion, ozone, UV and weather
- Easy to strip
- Halogen free, flame retardant
- Complies with TÜV Rheinland 2PfG1940/12.11 for AC cables

## Application

- Specially developed for connecting photovoltaic system components, modules or section cables
- Especially for use in micro-inverters and AC PV modules
- For permanent installation in dry and wet environments, agricultural businesses or outdoor facilities
- Dual insulated construction supports the use in non-earthed photovoltaic systems (complies with European standards (CENELEC HD)).

# RADOX® FR AUS - 4.0 to 35 mm<sup>2</sup>

Multi core cable with circuit integrity in case of fire - RADOX® 125

- Halogen free
- Flame retardant
- In case of fire no corrosive gases and low smoke
- Circuit integrity in case of fire
- Excellent high and low temperature, and ozone resistance
- Weatherproof
- Easy to strip

## Application

For emergency support systems: emergency lighting, smoke spill fans, fire alarms and sprinklers, emergency evacuation intercommunication systems, etc.

## Composition of cable

① Cores	stranded bare copper, 4 and 6 mm <sup>2</sup>
Conductor	stranded bare copper, 10 up to 120 mm <sup>2</sup>
Flame barrier	RADOX 125, colours see table
Insulation	RADOX
② Fillers (optional)	stranded bare copper, 4 and 6 mm <sup>2</sup>
③ Conductor	stranded bare copper, 10 up to 120 mm <sup>2</sup>
Insulation	RADOX 125
Colours	yellow-green
④ Sheath	RADOX 125
Colour	see table

## Technical data

Voltage rating	600 / 1000 V
Test voltage	3500 V AC
Max. conductor temperature	+110 °C
Max. conductor temperature	+280 °C
Min. operating temperature	-25 °C
Min. conductor temperature	-40 °C
Min. bending radius	6 × cable-dia.
	10 × cable-dia.

## Fire tests

Flame propagation:	
Vertical of a single cable	IEC 60332-1, EN 50265-2-1
Vertical of bunched cables	IEC 60332-3-24, EN 50266-2-4
Content of halogen acid gas	IEC 60754-1, EN 50267-2-1
Corrosivity of combustion gases	IEC 60754-2, EN 50267-2-3
Smoke density	IEC 61034-2, EN 50268-2
Circuit integrity	AS/NZS 3013, WS5
	category C 0 mg/g

# RADOX® FR AUS - 4.0 to 35 mm<sup>2</sup>

Multi core cable with circuit integrity in case of fire – RADOX® 125

# Electrical formulas

## Formulas

Required conductor cross section for electric cables

given	Direct current	Single phase alternating current	Three phase alternating current
Voltage drop, current	$\frac{200 \cdot L \cdot I}{\gamma \cdot u_0 \cdot U}$	$\frac{200 \cdot L \cdot I \cdot \cos\varphi}{\gamma \cdot u_0 \cdot U}$	$\frac{173 \cdot L \cdot I \cdot \cos\varphi}{\gamma \cdot u_0 \cdot U}$
Voltage drop, power	$\frac{200 \cdot L \cdot P}{\gamma \cdot u_0 \cdot U^2}$	$\frac{200 \cdot L \cdot P}{\gamma \cdot u_0 \cdot U^2}$	$\frac{100 \cdot L \cdot P}{\gamma \cdot u_0 \cdot U^2}$
Voltage drop, current	$\frac{200 \cdot L \cdot I^2}{\gamma \cdot p_0 \cdot P}$	$\frac{200 \cdot L \cdot I^2}{\gamma \cdot p_0 \cdot P}$	$\frac{300 \cdot L \cdot I^2}{\gamma \cdot p_0 \cdot P}$
Voltage drop, voltage	$\frac{200 \cdot L \cdot P}{\gamma \cdot p_0 \cdot U^2}$	$\frac{200 \cdot L \cdot P}{\gamma \cdot p_0 \cdot U^2 \cdot \cos^2\varphi}$	$\frac{100 \cdot L \cdot P}{\gamma \cdot p_0 \cdot U^2 \cdot \cos^2\varphi}$

### Key

$I$  = Current in ampère  
 $\gamma$  = Conductivity (copper 56, aluminium 34)  
 $L$  = Conductor lengths (single) in meters  
 $P$  = Transmission power in watts  
 $p_0$  = Power loss in % of the transmission power

$A$  = Conductor cross section in  $\text{mm}^2$   
 $u_0$  = Voltage drop in % of the operating voltage  
 $U$  = Operating voltage in volts  
 $\cos\varphi$  = Power factor (usually assumed to be 0.8)

The formulas stated for alternating and three-phase current do not give any consideration to the inductive resistance. This resistance is a function of the distance of the individual conductors between one another.

Determination of the current if the power is known.

### Direct current:

$I = \frac{P}{U \cdot \eta}$   
 $P$  = Rated power in W  
 $U$  = Voltage in V  
 $I$  = Current in A  
 $\eta$  = Efficiency

Example:  
What is the current that a heating unit of 3.4 kW absorbs at 440 V? ( $\eta = 1$ )

$$I = \frac{3400}{440 \cdot 1} = 7.7 \text{ A}$$

### Alternating current:

$I = \frac{P}{U \cdot \cos\varphi \cdot \eta}$   
 $P$  = Rated power in W  
 $U$  = Voltage in V  
 $I$  = Current in A  
 $\cos\varphi$  = Phase shift  
 $\eta$  = Efficiency

Example:  
What is the current consumption of an alternating current motor of 1.9 kW at  $\cos\varphi = 0.77$  and an efficiency of 79 %?  
The voltage is 230 V, 50 Hz.

$$I = \frac{1900}{230 \cdot 0.77 \cdot 0.79} = 13.6 \text{ A}$$

### Three phase current:

$I = \frac{P}{1.73 \cdot \cos\varphi \cdot \eta \cdot U}$   
 $P$  = Rated power in W  
 $U$  = Voltage in V  
 $I$  = Current in A  
 $\cos\varphi$  = Phase shift  
 $\eta$  = Efficiency

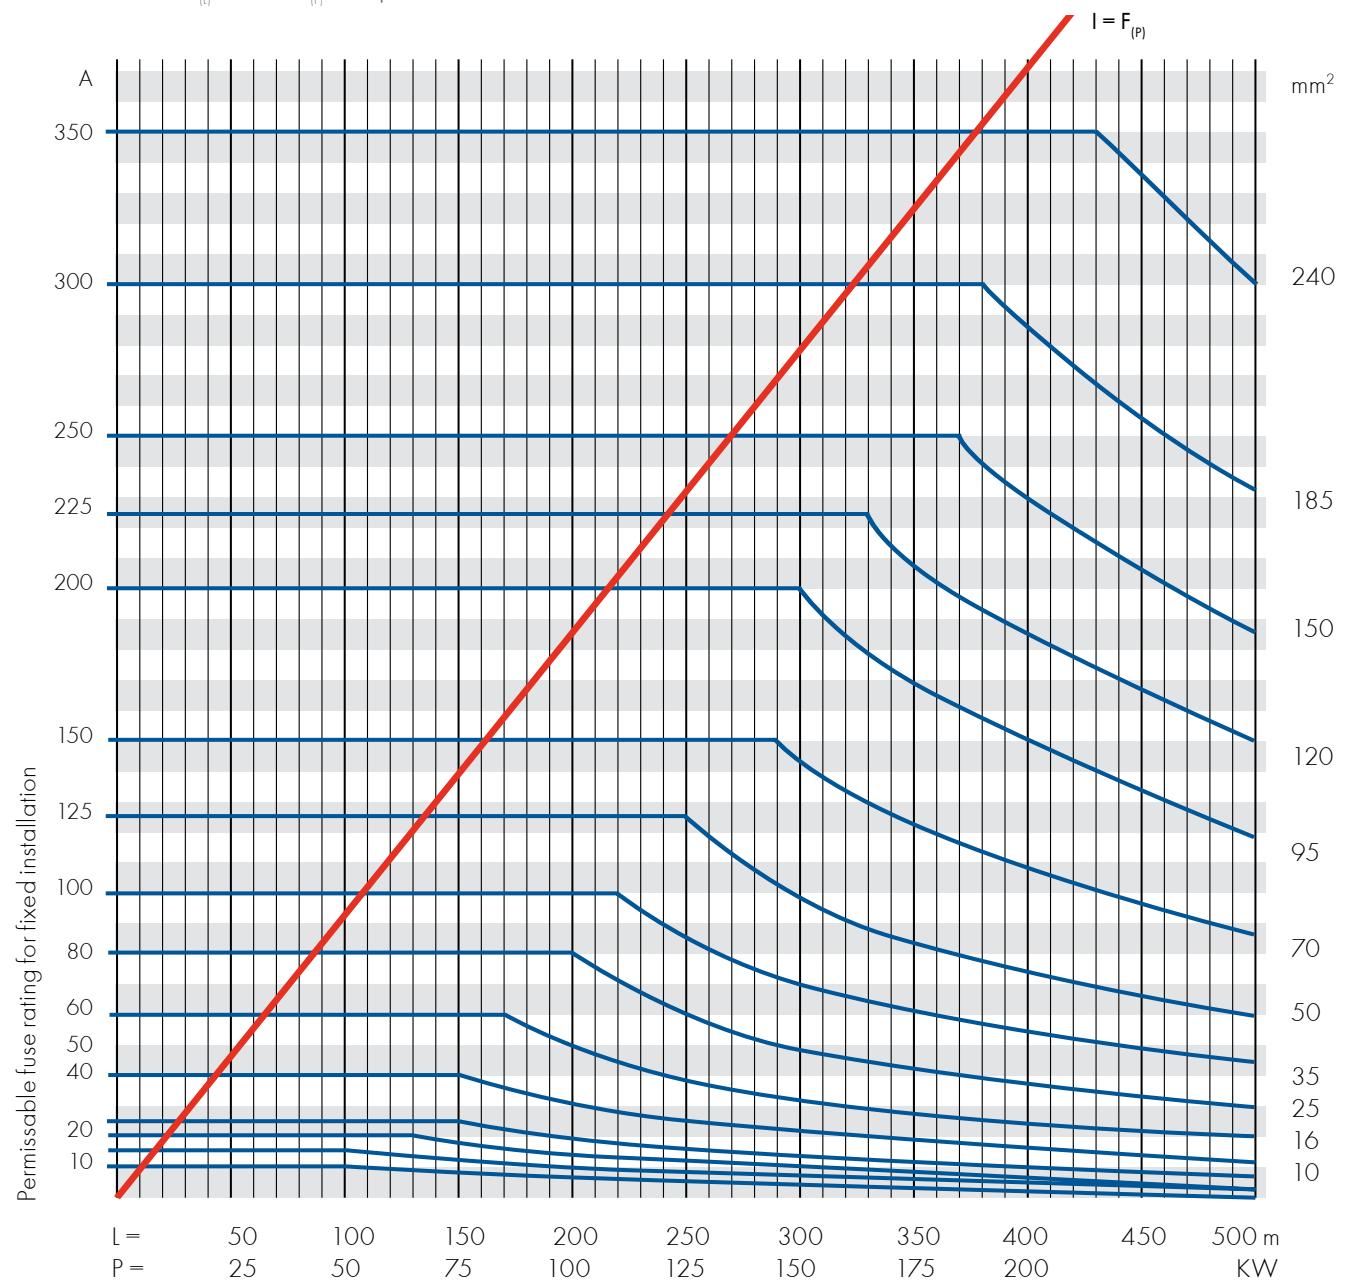

Example:  
What current does a three phase motor of 22 kW consume at 400 V, 50 Hz, with  $\cos\varphi = 0.89$  and an efficiency of 90 %?

$$I = \frac{22000}{1.73 \cdot 400 \cdot 0.89 \cdot 0.9} = 39.7 \text{ A}$$

# Table of three phase current

Permissible three phase cable loading at 5 % voltage drop

Presentation:  $I = F_{(L)}$  and  $I = F_{(P)} \cos \varphi = 0.82$

Example:

A power of 70 kW is to be transmitted across a distance of  $L = 450$  m. The function  $I = F_{(P)}$  gives us  $70 \text{ kW} \approx 130 \text{ A}$  (mixed users). The function  $I = F_{(L)}$  provides the cable cross section of  $95 \text{ mm}^2$ .

A length of 500 metres would already require a cable of  $120 \text{ mm}^2$  to ensure that the voltage loss and therefore also the power loss would be in an acceptable and economical range.

Representation:  $I = F_{(L)}$  shows that, for example, for  $95 \text{ mm}^2$  the permissible fuse of 200 A determines the load limit up to  $L = 300$  m, i.e.  $U_v < 5\%$ .

From  $300 \text{ mm}^2$  the cross section can no longer be fully utilised.

# Characteristics of materials

Typical characteristics of various insulation and jacket materials for cables

# Material designations

## Thermoplastics

ETFE	Ethylene-tetrafluoroethylene copolymer
FEP	Tetrafluoroethylene-perfluoropropylene copolymer
LSFH™	Halogen free, flame retardant material (low smoke free of halogen)
PBT FR	Flame retardant polybutylene terephthalate
PE	Polyethylene
PTFE	Polytetrafluoroethylene
PVC	Polyvinylchloride
TPE-E	Thermoplastic polyester elastomers
TPU	Thermoplastic polyurethane

## Crosslinked materials

CR Chloroprene rubber	
EPR	Ethylene propylene rubber
PE-X	Crosslinked polyethylene
PVDF-X	Crosslinked polyvinylidene fluoride
RADOX® 125	Polyolefin copolymer
RADOX® 125A	Polyolefin copolymer
RADOX® 125M	Polyolefin copolymer
RADOX® 125TM	Ethylene acrylate copolymer
RADOX® 155	Polyolefin copolymer
RADOX® 155S	Polyolefin copolymer
RADOX® ELASTOMER S (REMS)	Ethylene acrylate copolymer
RADOX® ELASTOMER S FH (REMS FH)	Ethylene acrylate copolymer
SIR	Silicon rubber
ETFE-X	Crosslinked Ethylene tetrafluoroethylene

RADOX® is a registered trademark of HUBER+SUHNER for electron beam crosslinked, heat resistant cable insulations and sheaths.

LSFH™ is a registered trademark of HUBER+SUHNER for halogen free, flame retardant cable sheaths.

# Standards

System for type designation of electric cables according to CENELEC HD 361

**Example:**

light weight PVC sheathed cable, flat

H      03      V      V      H      -      F      2      X      0.75

1 Type of standard	
H	harmonised type
A	acknowledged national type

5 Construction feature	
H	flat, divisible line
H2	flat, non-divisible line

2 Voltage rating UO/U	
01	100/100 V
03	300/300 V
05	300/500 V
07	450/750 V

6 Conductor type	
F	stranded (class 5) with flexible cables
H	stranded (class 6) with flexible cables
K	stranded (class 5) with permanently installed cables
R	stranded (class 2)
U	solid (class 1)

3 Insulation material	
4 Sheet material	
R	Ethylen propylen rubber, 90 °C
G	Ethylen vinylacetat
N	Polychloropren rubber
Q	Polyurethane
R	Ethylen propylen rubber, 60 °C
S	Silicon rubber
V	PVC
V2	PVC, 90 °C
V3	PVC, cold resistant
V5	PVC, oil resistant
Z	Crosslinked polyolefin compound, little corrosive gases, low smoke
Z1	Thermoplastic polyolefin compound, little corrosive gases, low smoke

7 Number of cores	
8 Protective earth conductor	
X	without protective earth conductor (yellow-green)
G	with protective earth conductor (yellow-green)

9 Conductor cross section in mm <sup>2</sup>

## Terminals:

Because of the larger diameter in classes 2, 5 and 6 compared with class 1, you have to select a terminal for these classes that is one nominal cross section larger.

# Guide to installation

Smallest allowable bending radii for power and signal cables

Conductor type	Cable diameter D mm			
Installation method	D ≤ 8	8 < D ≤ 12	12 < D ≤ 20	D > 20
solid, class 1/stranded, class 2				
- carefully bent at connection	2D	3D	4D	4D
- normal use	4D	5D	6D	6D
stranded, class 5 (HUBER+SUHNER)				
- fixed	3D	3D	4D	4D
- flexing	4D	4D	5D	6D

## Allowable tensile stress

1. For installing cables by pulling on the conductors, or by drawing sleeve, the following max. pulling force (P) is allowed:

$$P = 50 \times A \text{ (N)}$$

A = Sum of conductor cross section ( $\text{mm}^2$ )

2. When installing cables with high tensile armouring, the following max. pulling force (P) is allowed:

$$P = 9 \times D^2 \text{ (N)}$$

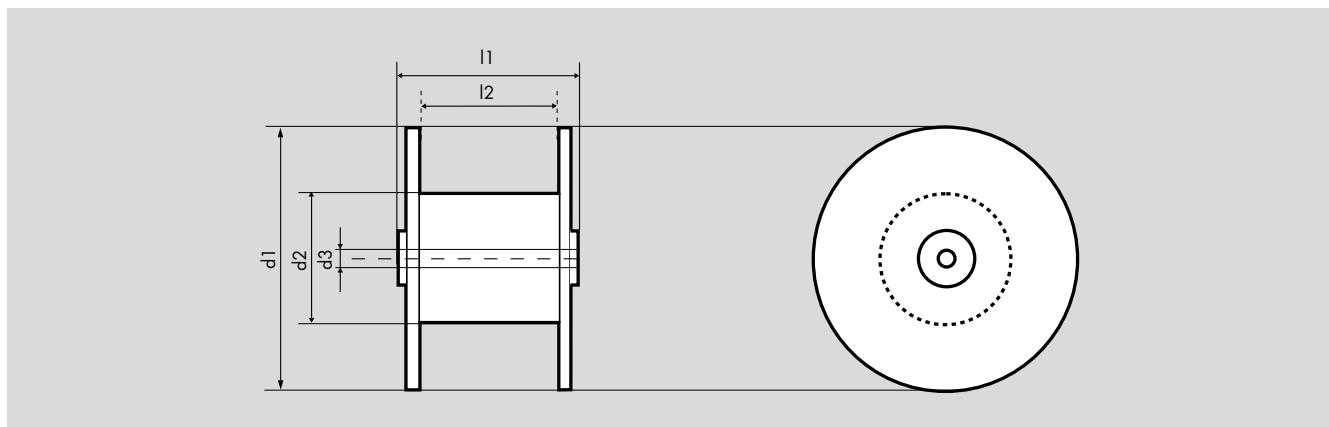

D = cable diameter over armouring (mm)

The calculation of pulling forces necessary for installation is done using the following formulas:

Pulling force for installation of a straight section without elevation difference.		Pulling force for installation of a straight section with elevation difference	
P =	$10 \times G \times L \times \mu$	P =	$10 \times G \times (L \times \mu \pm h)$
with	P: pulling force at the end of the stretch (N)	with	h: elevation difference (m)
G:	weight of the cable (kg/m)	Friction coefficient $\mu$	
L:	length of the section (m)	0.15 - 0.30	installation with rollers
$\mu$ :	coefficient of friction	0.40 - 0.60	installation in cement pipes
		0.15 - 0.25	installation in plastic pipes
		0.15 - 0.30	- with special lubricating grease
		0.15 - 0.30	- with water

N.B.: Very long cables with thermoplastic sheaths can be pulled into plastic pipes with the aid of lubricants only. Local heating, occurring mainly in bends, may cause the cable to stick to the pipe wall.

# EMC screened cables

The screening of cables can be described by the two coupling quantities of transfer impedance  $Z_t$  and transfer admittance  $Y_t$ . Both coupling quantities are basically a function of the geometry and the environment; depending on the specific application and requirements, the coupling quantities can be optimised for a given cable.

EMI	electromagnetic interference
EMP	electromagnetic pulse
ESD	electrostatic discharge
LEMP	lightning electromagnetic pulse
NEMP	nuclear electromagnetic pulse
TEMPEST	tap-proofness (leaves-dropping protection)
NEXT	near end crosstalk

With HUBER+SUHNER, your screening problems will end.

We can ensure this thanks to the vast experience accumulated in this field responding to every kind of customer need and collaborating continuously with research institutes.

Measurement engineering at HUBER+SUHNER

Complies with the following standards:

IEC 96-1 and 46 A/DIN 47250/

VG 95373/CCITT/...

Screenings for all EMC requirements

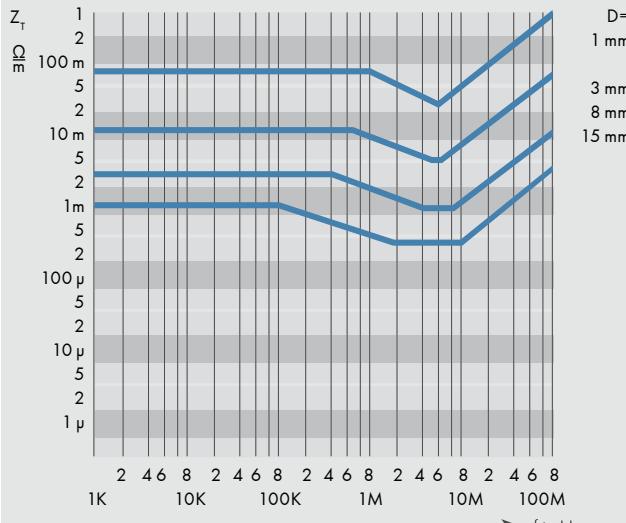

HUBER+SUHNER designs, optimises and produces products for a wide variety of performance classes. These products are implemented using different braids, foils, high-permeability intermediate layers, microwave absorbing and semi-conducting layers, mixed screens, etc.

# EMC screened cables

## Screened cables from single braid to superscreen

Transfer impedance values of single braid screening

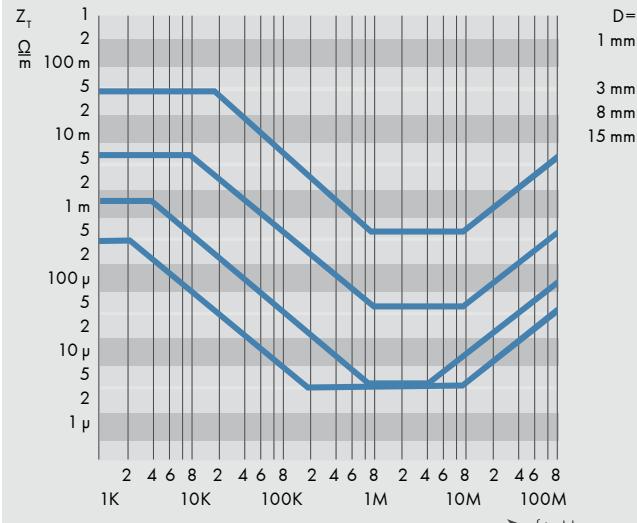

Approximate values

Transfer impedance values  $Z_T$  as a function of the frequency  $f$  and the cable diameter  $D$  as parameters.

Transfer impedance values of superscreens

Approximate values

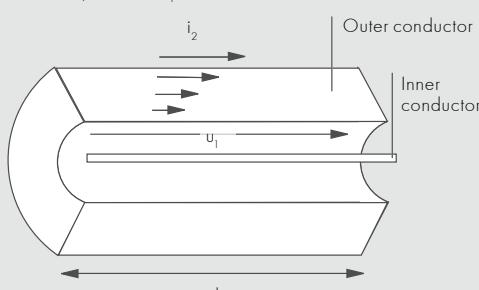

Transfer impedance values  $Z_T$  as a function of the frequency  $f$  and of the cable diameter  $D$  as parameters.

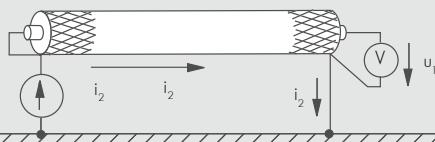

### The transfer impedance $Z_T$

(also called «coupling resistance») refers to the relationship between the current in one wire and the longitudinal voltage it induces in the other wire (ohmic-inductive coupling).

Definition of transfer impedance  $Z_T$

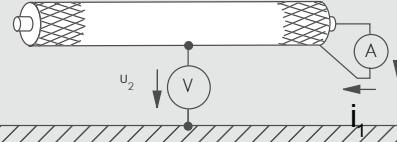

$$Z_T = \frac{u_1}{i_2 \cdot l} \quad \Omega/m$$

Definition of transfer admittance  $Y_T$

refers to the relationship between the voltage in one wire and the leak current it induces in the other line (capacitive coupling).

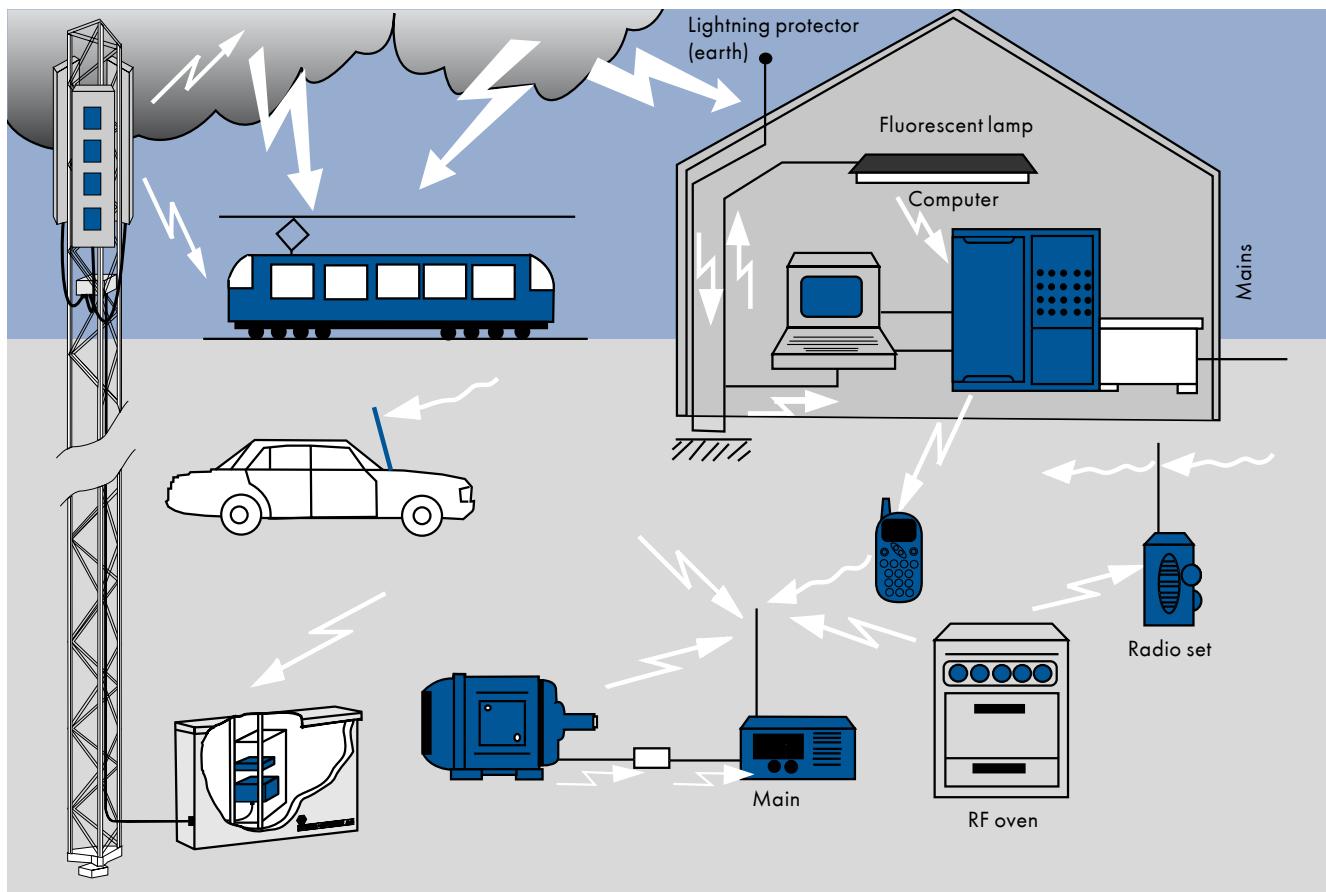

$$Y_T = \frac{i_1}{u_2 \cdot l} \quad S/m$$

The cable together with its surroundings form a three-conductor system. It consists of two coupled conductors with one common conductor (screen).

Transfer impedance  $Z_T$  and transfer admittance  $Y_T$  are cable quantities which are always defined in conjunction with the surroundings of the cable and the construction of the cable itself.

# Protect your equipment and machinery from interference and failure

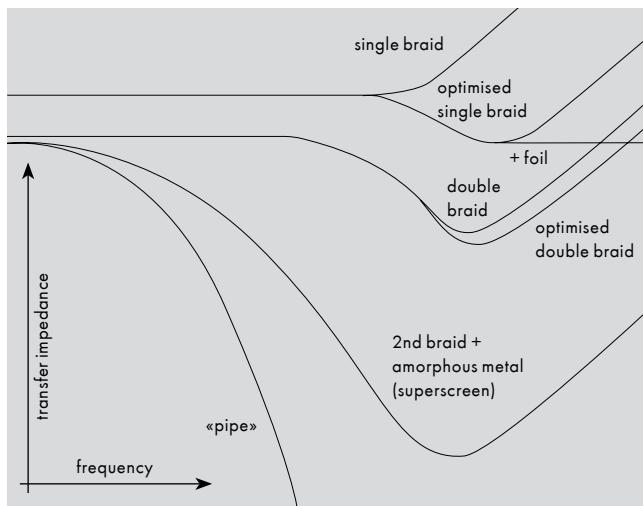

## The situation

Environmental pollution is a modern buzzword. But do you ever think of it as «pollution» by electromagnetic radiation, by «electrosmog»?

## Your problem

Only when machinery starts to fail and plant operation is disrupted do the people in charge start thinking. But things don't have to reach that point. Non-screened cables act in the same way as antennas, attracting interference from the outside or radiating it.

## Our solution

Copper braids prevent dangerous interferences with cables. At the same time, the interference radiated by the cable is reduced. Our solution consists not only in the specification of a degree of coverage. HUBER+SUHNER also defines the effectiveness of a copper braid as a measurable quantity. This noise immunity is expressed by the transfer impedance (coupling resistance) at a given frequency (MHz) in  $\Omega/m$ .

## Optimised, high grade screening

Optimized screening braids enable even the most intractable screening problems to be solved. And in screening cables, we take care to ensure that performance of the screened cables will not be significantly affected in terms of flexibility, workability, weight and dimensions.

# Fire test methods

## Fire test methods for electrical wires and cables

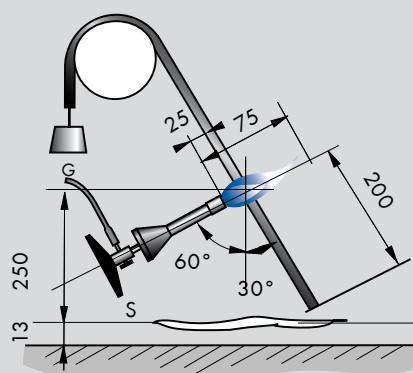

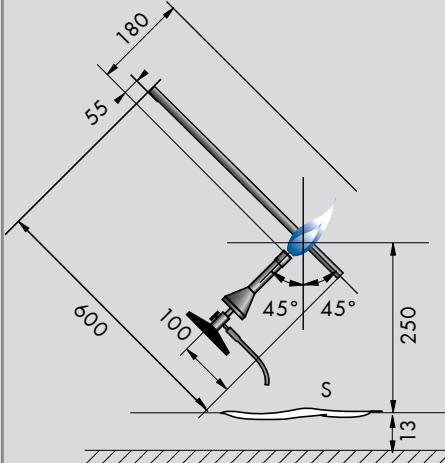

Designation	EN 50265-2-1 IEC 60332-1	EN 50265-2-2 IEC 60332-2

Test duration	cable dia D ≤ 25 mm: 60 s cable dia 25 < D ≤ 50 mm: 120 s	20 s
Conditions	The cable shall be self extinguishing. The damage by fire shall be more than 50 mm from the top fastening clamp.	The cable shall be self extinguishing. The damage by fire shall be more than 50 mm from the top fastening clamp.

Designation	EN 50266-2-4 IEC 60332-3-24	NF C32-070 test 2 UIC 895 VE appendix 7
Flame temperature	Determined by the prescribed propane gas and air volumes.	830 ± 50 °C
Test duration	cat. A (7 l combustible material): 40 min. cat. B (3.5 l combustible material): 40 min. cat. C (1.5 l combustible material): 20 min.	30 min.
Conditions	The damage by fire shall be maximum 2.5 m from the lower burner end.	The cable piece projecting from the pipe shall be not damaged.

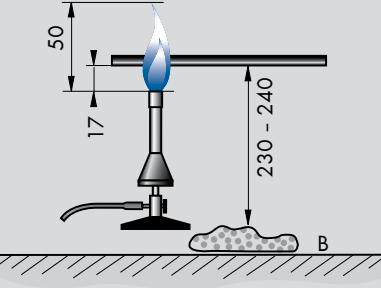

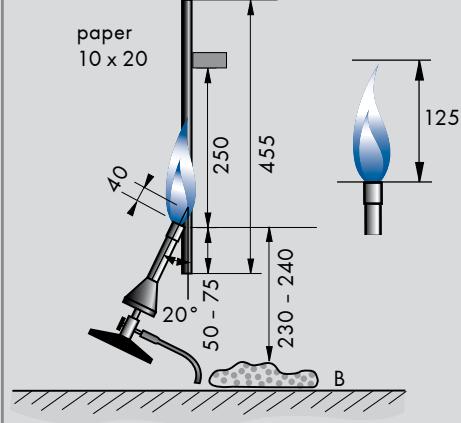

# Fire test methods

## Fire test methods for electrical wires and cables

Designation	MIL-W-22759 and MIL-W-81044 VG 95218-2 procedure 4	VG 95218-2 procedure 3
Flame temperature	min. 950 °C	Determined by the prescribed adjustment of the flame.
Test duration	30 s	cable dia D ≤ 25 mm: 60 s cable dia 25 < D ≤ 50 mm: 120 s
Conditions	The specimen shall not continue to burn for more than 30 s, and damage by fire shall not exceed 76 mm. Dripping material shall not ignite the tensioned tissue paper (S).	The specimen shall not continue to burn for more than 30 s, and damage by fire shall not exceed 76 mm. Dripping material shall not ignite the tensioned tissue paper (S).

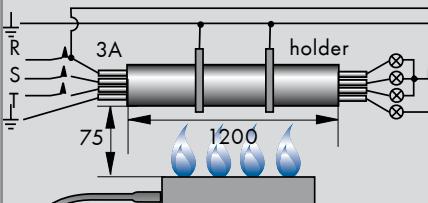

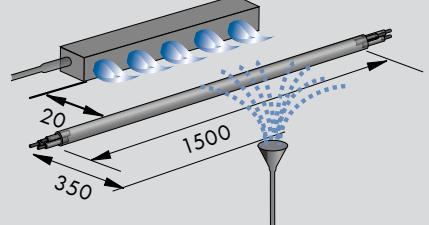

Designation	UL 1581 section 1090 Horizontal specimen AWM flame test	UL 1581 section 1061 UL 1581 section 1080 (VW1)
Flame temperature	Determined by the prescribed adjustment of the flame.	Determined by the prescribed adjustment of the flame.
Test duration	30 s	sect.1061: 60 s flaming, 30 s pause (3 ×) sect.1080: 15 s flaming, 15 s pause (5 ×)
Conditions	The rate of the flame propagation shall not exceed 25 mm/min. Dripping material shall not ignite the cotton wool underneath (B).	The paper shall not be burned more than 25 %, and the specimen shall not continue to burn for more than 60 s. Dripping material shall not ignite the cotton wool underneath (B).

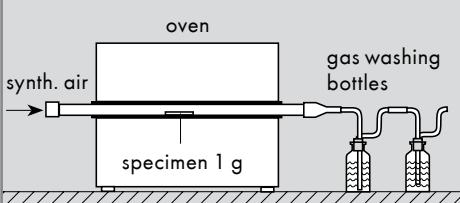

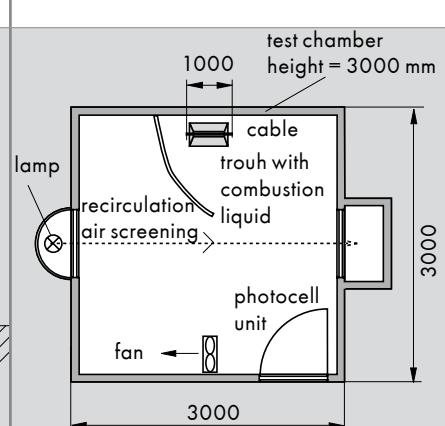

# Fire test methods

## Fire test methods for electrical wires and cables

Designation	IEC 60331-21, IEC 60331-23 DIN VDE 0472-814 BS 6387, category C	BS 6387, category W
Flame temperature	IEC, DIN VDE: min. 750 °C BS: 950 ± 40 °C	650 ± 40 °C
Test duration	IEC: 90 min. recommended DIN VDE, BS: 180 min.	30 min.
Conditions	Zwischen den Adern wird eine Prüfspannung angelegt. IEC: power cable: U <sub>o</sub> /U IEC, DIN VDE: data cable: 110V DIN VDE: power cable: 230/400V BS: all U <sub>o</sub> /U The fuses shall not blow and the incandescent lamps shall not extinguish.	A test voltage is applied between the cores which equals the mains voltage U <sub>o</sub> /U. After 15 min. exposure to the flame, the sprinkler is additionally switched on. The fuses shall not blow and the incandescent lamps shall not extinguish.

Designation	EN 50267-2-2 IEC 60754-2	EN 50268-2 IEC 61034-2
Flame temperature	min. 935 °C	Determined by the composition of the combustion liquid.
Test duration	30 min.	40 min.
Conditions	The pH value of the washing water shall be min. 4.3, its conductivity shall not exceed 10 µS/mm.	The light permeability of the resulting smoke shall be min. 60 %.

# Current carrying capacity

## of RADOX® 125 single core and multi core cables

### Scope

The following tables referring to RADOX connecting leads and multicore cables give easy and fast support for the layout of apparatus and components. The following remarks are based on today's state of the art and practical experience as described in the standard IEC 60216, IEC 60287 and IEC 60364. The application of products will frequently vary from the theoretical values of constant ambient temperature, constant current carrying, homogeneous laying and others. That means, in practice the theoretical current carrying will differ from the real values. For a safe layout of apparatus and components it is recommended to carry out a test with the installed connecting lead or cable under service conditions.

### Definitions

Current load	current passed through the cable during operation
Continuous operation	an operation with constant current whose duration is at least long enough to allow the system to reach thermal equilibrium, but may then go on indefinitely
Current rating	maximum permissible current under determined operating
Permissible operating temperature	maximum permissible temperature on the conductor in continuous operation
Wire	insulated single core
Cable	bundle with jacket with one or more insulated single cores
Conductor temperature	temperature of the surface of the core material

### General remarks

The current rating of a cable depends on the conductor cross section, on the cable design, on the characteristics of the insulation materials, on the installation conditions and, for larger cross sections, on the frequency (skin and proximity effects). Also, additional heating effects due to higher ambient temperatures, due to heating elements and due to bunching of cables have to be taken into account.

The conductor cross section has to be selected in such a way that the actual current load does not exceed the current rating, i.e. the conductor temperature does not exceed the permissible operating temperature. The determining factor is the appropriate, most unfavourable operating condition, encountered during operation over the whole length of the cable.

### Current rating under service conditions $I$ in A

$$I = I_n \cdot f_1 \cdot f_2 \cdot f_3 \cdot f_4 \cdot f_5$$

$I$  in A Current rating for continuous operation under service conditions

$I_n$  in A Current rating for continuous operation under standard conditions

$f_1$  Reduction factor for increased ambient temperature

$f_2$  Conversion factor for deviated conductor temperature, acc. to temperature index, IEC 60216 (20 000 h)

$f_3$  Reduction factor for multicore cables

$f_4$  Reduction factor for increased frequency

$f_5$  Reduction factor for bundled cables

# Current carrying capacity

## of RADOX® single core and multi core cables

### Standard conditions for current rating ( $I_N$ [A])

The tabled values for the current rating were calculated according to IEC 60287 for the following standard conditions:

- Continuous operation
- Single circuit for 3-phase current, single conductor for 1-phase current
- 30 °C ambient temperature and sufficiently large and ventilated spaces, whose ambient temperature is not appreciably increased by the heat coming from the cables.
- 120 °C conductor temperature
- Frequency up to 200 Hz

Installation in air, unrestricted heat dissipation, means that the following installation conditions are observed:

- Distance of the cables from the wall, from the floor, from the ceiling > cable diameter
- Distance between two adjacent power circuits > 2 x cable diameter
- Vertical distance between power circuits laid one upon another for individual cables > 2 x cable diameter and for layers of cables > 200 mm
- Perforated tray with a perforation > 30 % of the total surface

Open trays are continuous supports with vertical sides, but without cover. A possible perforation accounts for < 30 % of the total surface.

Closed ducts are entirely closed. Pipes belong to this category also. The max. filling degree is 60 %.

Maximum permitted conductor temperature for various insulating materials according to IEC 60216 (20 000 h / 50 % elongation at break):

PVC, CR	70 °C
PE-X, EPR	90 °C
RADOX 125	120 °C
RADOX 155	135 °C

### Life time expectation

If crosslinked wires are used at higher temperatures than indicated by the temperature index of IEC 60216, the life time is reduced accordingly. Analogical, the life time will increase at lower temperature. RADOX® 125 for example has a life span of 20 000 h at a conductor temperature of +120 °C, which is approx. 2.5 years. If it is used at another temperature, life time expectations are as follows:

Example RADOX 125, i.e. 120 °C / 20 000 h

160 °C	1 250 h
150 °C	2 500 h
140 °C	5 000 h
130 °C	10 000 h
120 °C	20 000 h
110 °C	40 000 h
100 °C	80 000 h
90 °C	160 000 h
80 °C	320 000 h
